

Discover The Perfect Plant For Every Place In Your Garden

The first step in choosing the right plants for your garden is to determine your climate zone. Your climate zone is based on the average annual temperature in your area. You can find your climate zone by visiting the [USDA Plant Hardiness Zone Map](#).

Once you know your climate zone, you can start to narrow down your plant choices. Some plants are only hardy in certain climate zones, so it's important to choose plants that are suited to your area.

In addition to climate, you also need to consider your soil type and sunlight conditions. Some plants prefer well-drained soil, while others can tolerate wet or clay soil. Some plants need full sun, while others can tolerate partial shade or even full shade.
