BOTANICAL NOMENCLATURE

To correctly identify your plant for exhibition in a GCA flower show, you need to know its botanical name. The use of the common name may cause confusion because it can vary by geographic location. Take, for example, *Liriodendron tulipifera*. It is commonly called Tulip Magnolia, Tulip Poplar, Yellow Poplar or Canary Whitewood depending on where you live. In addition, many plants do not have common names. Botanical names are established by the *International Code of Botanical Nomenclature*. Here is how to write a botanical name correctly.
