

True Zero Touch Windows 10 Operation System Deployment With Microsoft Sccm And How IT Can Simplify Your IT Environment

With the advent of Windows 10, Microsoft introduced a new and improved way to deploy operating systems: True Zero Touch. This method allows you to deploy Windows 10 to new devices without any user interaction, making it ideal for large-scale deployments or deployments to remote locations.

In this article, we will explore the benefits of True Zero Touch and how you can use it to simplify your IT environment.

What is True Zero Touch?

True Zero Touch is a method of deploying Windows 10 that does not require any user interaction. This is made possible by using a combination of Microsoft System Center Configuration Manager (SCCM) and Windows Deployment Services (WDS).

True Zero Touch Windows 10 Operation System Deployment with Microsoft SCCM and MDT

SCCM is a Microsoft management tool that allows you to manage and deploy software, updates, and operating systems to devices on your network. WDS is a Microsoft service that allows you to boot devices from a network share, making it ideal for deploying operating systems.

Together, SCCM and WDS can be used to create a Zero Touch deployment that will automatically deploy Windows 10 to new devices without any user interaction.

Benefits of True Zero Touch

There are many benefits to using True Zero Touch to deploy Windows 10, including:

- **Reduced deployment time:** True Zero Touch can significantly reduce the time it takes to deploy Windows 10 to new devices. This is because the deployment process is automated, eliminating the need for manual intervention.
- **Increased efficiency:** True Zero Touch can help you to increase the efficiency of your IT environment. This is because you can use it to deploy Windows 10 to multiple devices simultaneously, freeing up your IT staff to focus on other tasks.
- **Improved security:** True Zero Touch can help you to improve the security of your IT environment. This is because it uses a secure network share to deploy Windows 10, eliminating the risk of data theft or infection.
- **Reduced costs:** True Zero Touch can help you to reduce the costs of deploying Windows 10. This is because it eliminates the need for

manual intervention, reducing the amount of time and resources required to deploy the operating system.

How to Use True Zero Touch

To use True Zero Touch, you will need to have a SCCM and WDS infrastructure in place. You will also need to create a Windows 10 deployment package.

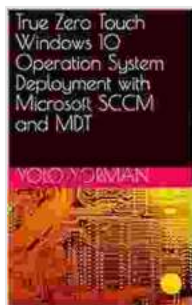

Once you have everything in place, you can follow these steps to create a True Zero Touch deployment:

1. Create a new SCCM task sequence.
2. Add a step to the task sequence to boot the device from the WDS network share.
3. Add a step to the task sequence to install the Windows 10 deployment package.
4. Publish the task sequence.
5. Assign the task sequence to the devices that you want to deploy Windows 10 to.

The devices will automatically boot from the WDS network share and begin the Windows 10 deployment process. Once the deployment is complete, the devices will be ready to use.

True Zero Touch is a powerful tool that can help you to simplify your IT environment and reduce the costs of deploying Windows 10. By following the steps outlined in this article, you can create a Zero Touch deployment

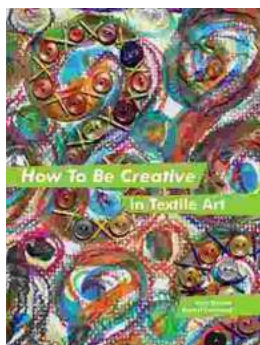

that will automatically deploy Windows 10 to new devices without any user interaction.
